

ABSTRACT

A color coded home visitor greeting lamp system comprises a circuit board having an electric port with the circuit board connected to a controller, a light bulb
5 having a bulb base detachably mounted in the port where the light bulb is blinkable under control of the controller, a flashing member removably provided between the bulb base and the port, and a substantially transparent covering detachably mounted over the board.
10 The covering has hook rails and slide panels so that the slide panels are detachably slid in the hook rails.
